Enable the Import Text & Symbols tool to import text files, symbols and complete drawings, such as 2D or 3D symbols from suppliers, manufacturers or other 3rd party sources. (video: 1:50 min.) Create a new text or symbol in the AutoCAD environment, not by copying existing text or symbols. Enable new text and symbol creations through the existing Symbol Management Tool, now with Symbol Styles, so you can speed up the design process. (video: 1:05 min.) Quickly add feedback to the CAD models you create. Create paper with which to print copies of your designs, and then update your drawings with feedback directly from your printer. (video: 1:23 min.) Easily upload your drawings to the cloud for your team to access online. (video: 1:08 min.) Cascade: When you view your drawing from the Perspective (3D) or Isometric (2D) tab, you can choose the exact perspective you need from the options menu in the Editor (camera), the Panes tab of the Window menu, and via the keyboard command: View / Select Perspective or View / Select Isometric. Now, when you select the perspective you want for the first time, it's automatically added to the perspective that you open the drawing in. For example, when you open a drawing from the previous drawing, AutoCAD adds the "isometric" perspective as the first perspective. You also can customize your perspectives in the Editor (camera). (video: 1:32 min.) Selecting a top view in the drawing editor now shows a new menu item, "Select Top View". (video: 1:02 min.) You can add special symbols that help you see what you are creating. For example, the symbol "TL" lets you see the current layer you are working on, even when the layer is hidden. (video: 1:10 min.) You can now add a dynamic preview in your drawings based on the active camera angle and orientation, using Dynamic Preview. (video: 1:15 min.) When you create a text box, you can now choose a horizontal or vertical text orientation. (video: 1:15 min.) You can now change the default number format, including the use of a fraction format.
