crack, xforce xp 64 bitQ:  
Maven'maven-metadata.xml' not  
present in project directory I am  
trying to set up POM with Maven  
3.1.1 as per the documentation in  
section 'Team Archetype'. I am  
using Maven 3.1.1 on Windows 7. I  
have following directory structure:  
application ---> [src,test,resources]  
|----- pom.xml |----- [xmlint-1.2.0.po

---

m,xalan-2.6.0.pom] I would like to have following parent dependency:

xmlint-1.2.0.pom as parent

dependency xalan-2.6.0.pom as

parent dependency There seems to

be a problem with parent

dependency. When I execute the command 'mvn compile', the error

message is following: [ERROR]

Failed to execute goal org.apache.

---

maven.plugins:maven-metadata.xml:2.0.1: Could not transfer metadata org.apache.maven.plugins:maven-metadata.xml from/to central ( Connection to timed out: could not connect to repository From the URL it would seem that the issue is with following files: pom.xml xmlint-1.2.0.pom xalan-2.6.0.pom

---

My question is how can I configure my Maven to correctly get both parent dependencies. Thanks. A:  
The problem here is xalan-2
