Besides the basic mathematical operations, Big Calculator also includes some trigonometric functions. Big Calculator Overview: Calculate: You can perform only basic mathematical operations like: multiplication, subtraction, addition, division, powers and modulo. Trigonometric calculations can be done by entering special functions (for example, sin(x), cos(x), tan(x)) or by using a graphic calculator (for example, logarithmic, exponential, natural logarithm, etc.) Nearest: You can determine the closest prime number to a given number. The nearest prime numbers are calculated by logarithm from a given number until the prime numbers under the entered number. The user selects the starting value of logarithms to start calculations (0, 1, 2, etc.) Square Root: You can find the square root of a given number. This function can return correct roots, but it can also return incorrect values. The user has to enter the required number to start calculations (4, 5, 6, etc.). If the given number is negative, it will return the inverse of this number Ln: You can use this function to determine the natural logarithm (e.g. ln(3)) of a given number. This function will return the results correctly, but it can also return incorrect values. The user has to enter the required number to start calculations (3, 4, 5, etc.).
