CADMAN® CNC Software Release 10 includes a .Q: Looping through an array with an odd number of elements I am trying to write a method that will take an array that has an odd number of elements as input. The method then should cycle through the array from left to right and compare each element with the one in its previous position. Basically, it should loop through the array and check every other element. Any ideas on how to write this? A: Break this down. How will I get to the next element? You will go to the next element in the array twice the next time you loop. That means: arr[0] and arr[1] are the first element of the odd numbered array. arr[1] and arr[2] are the next element after the first time that you loop, they are also the first elements in the odd numbered array. Democratic presidential candidate Rep. Beto O'Rourke (D-Texas) will be speaking at the University of New Hampshire on Friday. UNH's College Democrats will host O'Rourke at the Neil J. Saban Theatre, located at 225 Elm Street in Durham. The event is scheduled to begin at 7 p.m. Tickets cost \$10 for students and \$20 for general admission. Doors open at 6 p.m. O'Rourke announced his presidential campaign on March 14. At a rally the following day in Columbia, South Carolina, he said, "Yes, we can." He has since been surging in the polls, rising from third place in early May to second place in recent polls. On his campaign website, O'Rourke writes, "We live at a moment of great peril and great promise. A moment when the problems seem insurmountable and the solutions elusive. We have made progress in ensuring that every child in America has a chance at a better future, but we must work even harder to achieve
